**NO PICNIC.**

The Farmers' Picnic to Have Been Held Next Monday. Has Been Declared off.

The second annual picnic of the Iosco County Farmers' Institute Society, which was to have been held near the Greenwood school house, in Grant, next Monday, Sept. 3, has been declared off. This action was found necessary by the officers for several reasons, one was owing to the fact that the farmers' were very busy, another being a misunderstanding regarding ground, and inability to have same ready to accommodate the picnic. Much difficulty was also being had in regard to securing a desirable speaker for the occasion.

It is with much regret that the officers found it necessary to take this action but no other course appeared possible to them.

CONVENTION DATES.

- August 29-29—Prohibition state convention at Lansing.
September 10—Democratic county convention at Tawas City.
September 13—Democratic congressional convention (10th district) at Bay City.
September 17—Democratic representative convention (Iosco district) at West Branch.
September 18—Democratic senatorial convention (25th district) at Roscommon.

Gov. PINGREE says that he "will probably hold his nose and vote for McKinley."

THE democratic congressional convention at Bay City, Sept. 12 will probably nominate John Donovan, of that city.

THE Grand Army of the Republic encampment at Chicago this week has been the greatest in the history of that organization.

DETROIT has been surrendered during this week to thousands of enthusiastic Knights of Pythias, the occasion being the meeting of supreme lodge.

PRESIDENT MCKINLEY has asked ex-President Cleveland and Harrison to accept appointments as members of the international board of arbitration under the treaty agreed to at The Hague peace conference.

THIS is a good year for the voters of Michigan to declare their independence and vote for the man instead of the party. Vote for the man you believe to be honest regardless of what party he represents.

THE raise in the price of sugar by the trusts this year netted the masters \$30,000,000. This is nearly \$2 a family! If the law had laid a tax of two dollars a family on sugar it would have hurled from power any party that did it and would have caused tax riots all over the country.

A state legislator was looking through the records of the last session, a few days ago, and found a committee report on charges that hooding was going on in the house. The committee that investigated the charges made a report in the closing days of the session. Here is a paragraph: "The charges were based on nothing more tangible than hearsay and were absolutely unwarranted."

Chinese consider themselves and their country in the pink of civilization, while they class all other nations indiscriminately as outer barbarians. No doubt they also consider China as the most delightful and orderly nation in the world to live in, and such little incidents as insurrections, riots,

Chinese minister in America has been recommending the women doctors of this country to go to China, which he says is an earthly paradise for physicians.—Chicago News.

NEXT to the great evil of corruption in state legislative bodies, the evil most to be combatted is the evil of hasty, ill-considered legislation and incessant statute tinkering, due in many cases to no higher motive than mere caprice. A commission on the revision of statutes in the state of New York finds that in the course of 122 years no less than 49,000 laws have been enacted by the New York legislature. If the mass of legislation is proportionately as great in Michigan as in New York, the number of laws passed by Michigan legislatures during the 63 years since the admission of the state would almost reach the 25,000 number.—News.

Prohibition State Ticket.

The prohibition state convention was held at Lansing, Tuesday and Wednesday, and the following nominations for state officers were made: Governor—Prof. Frederick S. Goodrich, of Albiou. Lieutenant Governor, Trowbridge Johns, Marquette. Secretary of State—Reuben C. Reed, Howell. State Treasurer—John F. Esley, Plainwell. Attorney-General—William D. Farley, Battle Creek. Auditor-General—Walter S. Westram, Adrian. Superintendent of Public Instruction, Daniel S. Warner, Spring Arbor. Commissioner of the state Land Office, Gideon Vivier, Detroit. Member of the State Board of Education, Samuel W. Bird, Denton.

Crop Report.

U. S. Department of Agriculture Climate and Crop Bulletin of the Weather Bureau, Michigan Section for the week ending Aug. 27, 1900. says:

The mean daily temperature for the week ended August 25, was 72.0 degrees, or 6.9 degrees above the normal; the average total precipitation was 1.33 inches, or 0.88 of an inch above the normal; the sunshine averaged 43 per cent of the possible amount. High temperatures, heavy rainfall, considerable cloudiness and much high winds have characterized the weather of the past week. Warm moist weather has been very beneficial to corn, potatoes, buckwheat, sugar beets and pastures. The heavy rains have greatly delayed the harvesting of oats, peas and spring wheat in the upper peninsula, and in many cases have sprouted the grain in the shock, thus doing considerable damage. In the lower peninsula high winds have blown down much fruit and flattened considerable corn. On the whole the week has been generally favorable in the central and southern counties for the progress of field work and the maturity of outstanding crops. Corn has made wonderful progress and is generally very promising. Some blight to late potatoes is reported, but generally they are in fine condition. Beans have improved slightly and are about ready to pull in southern and central counties, but indicate a generally light crop. Buckwheat has improved, but on the whole is not well filled. Sugar beets continue to make a fine growth and a good crop seems assured. Pasturage is much better than is usual in August. Reports regarding apples vary greatly; they have dropped more than usual and high winds have blown down considerable fruit: some correspondents report prospects fair, others very poor; a consensus of opinion indicates a fair yield of fall apples, especially in some of the western counties and a poor to rather light yield of winter apples.

Ample rainfall has put the ground in fine condition for plowing which is well advanced in the central and southern counties and generally begun in the other sections of the state. In the southern counties much ground has been fitted for seeding and in a few cases some rye has been sown.

That Throbbing Headache

Would quickly leave you, if you used Dr. King's New Life Pills.

STATE LANDS.

Michigan Holds Title to Over Half a Million Acres.

The Largest Share of Which is Primary School and Homestead Lands.—Some Figures.

In his annual report for the fiscal year ending June 30, last, Land Commissioner French gives the amount of land held by the state as follows: Primary school lands, 155,989.82; university, 40; agricultural college, 62,522.29 acres; salt spring, 280 acres; asylum lands, 1,122.98; acres; swamp lands, 81,648.56 acres; tax homestead lands, 235,441.12 acres; total, 537,045.77.

During the year the land office has sold 13,340.71 acres of agricultural college lands for \$87,743.78; 16,760 acres of primary school land for \$36,228.48; 14,581.40 acres of swamp lands for \$20,142.81; 40 acres of salt spring land for \$160; 80 acres of asylum lands for \$320; and has patented 2,409.13 acres of homestead lands, the total number of acres disposed of being 47,211.24, for which \$144,595.07 will be received.

During the year there have been patented to the state by the United States 1,120 acres of swamp lands, and lists embracing 159 acres approved to the states have been received, for which patents will follow. Several claims by the state to certain tracts of land as swamp and overflowed lands have been decided adversely to the state by the federal authorities during the year, while others have been decided favorably and the lands will be conveyed in the future.

Agricultural college lands have not sold at high prices during the year. While 779 acres more land were sold than during the previous year, the total amount received is \$9,165.50 less. The agricultural lands were withdrawn from sale pending examination and appraisal and the present

there remains approximately 60,378 acres not yet restored to market. These lands are in the counties of Alcona, Alpena, Iosco, Oscoda, and Presque Isle. Many of them have been denuded of valuable timber since their withdrawal and the marketable value has been very much reduced. It is said that the amounts received for trespasses on these lands, while large, will not compensate the state for the loss of the timber and the expense of the trespass agents engaged in an endeavor to protect the state. A large portion of the money lost on the account it is believed might have been saved if the lands had been examined and restored to market two or three years ago.

During the past year all primary school lands were withdrawn from the market and examined, the lands being restored to market as soon as the appraisal of their value was made. Owing to delays in the examination of this class of lands none were placed on sale until March of the present

year. Three sales have since been held and the commissioner promises that no pains will be spared to have all the lands examined and restored to market and not later than November next.

No tax homestead lands were deeded to the state during the past year by the auditor general. On the other hand, it was discovered that a large amount of land deeded to the state was not legally within the provisions of the law and the auditor general issued certificates of error against the deeds, by which 28,199.67 acres were conveyed to the state and the lands were again entered upon the auditor general's books as delinquent tax lands.

News Items Gathered From Many Sources

FARM NOTES.

Did the drought shrink your taxes any this year?

Do you know just how much each of your cows are bringing you?

The milch cow is very nervous, and when in her presence we should be very careful what we do not to excite her.

Avoid flies in the milk by keeping the can well covered while milking, by using a clean cloth to throw over the top.

Feed dairy cows liberally; records show that the cow that charges you most for feed charges you least for butter.

You are uncomfortable if your suspender is not adjusted just right. What do you think of a horse with an ill fitting collar.

The season for disposing of farm crops is at hand and with it will come the faiker with some innocent paper for you to sign. Well, when he makes his appearance turn the dog loose.

Lean about testing milk. then look at the amount of butter fat produced by the cow and not the per cent of fat in the milk, for after all a large amount of butter fat is what is wanted.

Take the blinds off the bridle or else adjust them so that the animal will not be tortured all day. Better take them off entirely. Not one horse in 1,000 needs them and they are up on the bit and drive better with off. Try it if they haven't gone blind.

The prospects for the apple crop are bright, according to the report of G. C. Richardson, of Kansas, and who is probably the largest apple grower in the world. "In Arkansas, Nebraska and Iowa the prospects are for 40 per cent of a full crop; in Colorado and Montana, an average crop; in the Pacific coast states, Oregon, Washington and California, a full crop; Michigan a full crop, but dropping badly; western New York and New England, average crop; central New York, damage of a local nature from canker worms.

PUMPKINS FOR COWS.

Judiciously planted in the corn field, a crop of pumpkins can be raised as a sort of a double crop that will make a most excellent food for cows in the winter, says a correspondent of the American Cultivator. The value of root crop is well known in helping to regulate the bowels of the stock when fed heavily on grain in winter. Pumpkins come under this same class, and they should be fed for about the same purpose. Nature seems to have designed the pumpkins for the cornfield, for one can raise just enough to feed with the crop of corn produced on the same land. In addition to this, the pumpkins furnish excellent food for chickens. It is better for the stock to have the seeds removed, and it is better for the poultry to have the seeds crushed, ground or broken. The feeding of pumpkins will largely decide their merits. To let the stock eat them in the field is a great mistake. Gather them all for winter food and wait until other succulent food has disappeared. Then commence to feed the pumpkins gradually increasing the quantity until the fall diet is reached. One large pumpkin or two small ones per day for each animal is a liberal diet and sufficient to keep the system in excellent condition. They should not be fed in large pieces at all, for there is danger of the cows getting choked with a big lump. Cows actually break off and loosen their teeth trying to break up pumpkins fed to them in large pieces. It is no difficult work to break the pumpkin up and then chop them fine with a sharp

can eat with relish. When first broken open, scoop out all the inside part, thus removing the seeds, which sometimes prove dangerous to the cows. Put the seeds and pulp in which they are buried into a sauge grinder and grind them into small pieces. The seeds will thus be crushed, so that the chickens can eat them without danger. They will also eat the pulp itself. This practice is certainly recommended by the chickens, which enjoy the feast and look forward to the ground pumpkin seeds every day. Every part of the pumpkin is thus utilized, and one can obtain a winter's supply of good food for both stock and chickens from the corn field without much extra cost for labor. Those who do not plant pumpkin seeds freely in the corn field lose far more than they realize and miss a chance to get a double profit from the land.—Ex.

FERTILIZER ANALYSES.

There have just been issued from the Michigan State Agricultural college Experiment Station, two bulletins, numbered 181 and 185 respectively, the former on soil tests, clover and sand lucerne and wheat experiments, and the latter on fertilizer analyses.

The bulletin on fertilizer analyses is of importance to every farmer in Michigan who contemplates using commercial fertilizer on wheat or other farm crops. It gives a complete analysis of every fertilizer legally sold in the state.

Bulletin 181 records the results of fertilizer experiments on a dozen farms scattered through the lower peninsula from Antrim and Otsego counties to Kalamazoo and Macomb counties. These experiments were performed on both upland and muck. On muck the very best fertilizer is stable manure. Air-slaked lime did not seem to benefit crops on muck. There were indications that ashes, either leached or unleached will prove valuable for muck.

Sowing clover without nurse crop is shown to be a good method for securing a satisfactory seeding for seasons when the climatic conditions are adverse.

Sand lucerne has shown itself most valuable leguminous crop for light sandy soils, as a substitute for clover. A yield of 6,800 pounds of dry hay per acre was obtained from a knoll on which the sand was so light as to drift badly when not covered with growing crops. The third year after sowing there was a yield of over five tons to the acre on the same plot notwithstanding a drouth.

Where varieties of wheat were tested on adjacent plots of about an acre in area, the Gold Coin slightly outyielded the Dawson Golden Chaff, with the International No. 6 a close third and a new variety called the Russian, fourth.

Experiments in the preparation of wheat ground showed that where the soil was plowed four inches deep, with a gang plow shortly after the removal of the preceding crop of oats or was plowed early eight inches deep, then harrowed at intervals until the wheat was sown, the yield was much greater than on the plot where the plowing was done the day before the wheat was sown. Twice harrowing with the spring tooth harrow immediately after the removal of the oat crop, followed by plowing just before the drill, gave in this one experiment results nearly as good as those obtained from the early plowed plots.

It Helped Win Battles.

Twenty-nine officers and men wrote from the front to say that for scratches, bruises, cuts, wounds, sore feet and stiff joints, Bucklen's Arnica Salve is the best.

The owner of thirty acres of tillage land suitable for dairy farming proposes to keep it all under constant cultivation, feeding the crops in the stable. He will have a silo or two for storing the fodder and thus have succulent food for his cows the year around. His present plan is to have 15 acres in ensilage corn every year and sow oats and peas on the other 15 acres, alternating annually so that what is in one crop one year will be in the other next. The manure is all to be carefully saved and applied to the land together with a little fertilizer in the hill for the corn. Besides the fodder grown the cows will have a daily feed of bran and cotton-seed meal.

I am asked if under these conditions the land may be expected to increase in fertility from year to year? The aim should be to have it increase till the highest state of profitable production is reached. It will depend somewhat on whether milk is sold or made into butter, and on the amount of grain purchased and fertilizer used. If butter is made and the skim-milk is fed on the farm to swine or other animals in connection with more purchased grain the increase should be rapid especially if fertilizer is used freely the first few years to hurry up the improvement of the land.

There is no question but this world is capable of maintaining its fertility under reasonable management. Land grows poorer when fertility is removed in the form of bone, blood, muscle, wool milk or egg, in short, in the bodies of animal or man; also when the excrement of either is diverted into the rivers or sea from the land from which these products were originally derived. It may take a long while for a wasteful system to render the world barren but a very long time to make a marked impression on limited acres as a farm or a township. Thousands and thousands of fertile farms have been ruinously depleted by continued selling off milk, meat and grain without carrying back an equivalent in some form. Our present popular system of sewerage which is carrying vast quantities of actual fertility from the land out to sea cannot be viewed without anxiety by anyone at all familiar with inexorable laws of nature.

Thirty acres of good tillage land devoted to dairying under economic conditions and management should maintain a family in comfort if not in elegance. Of course a liberal area should be devoted to fruit and vegetable garden crops for home use at least. One ought not to make the enriching of land the chief aim in life, but rather to make the most of life, and at the same time endeavor so to manage that the world will be none the worse but a little better for our having lived in it.—New England Farmer.

Story of a Slave.

To be bound hand and foot for years by the chains of disease is the worst form of slavery. George D. Williams, of Manchester, Mich., says: "My wife has been so helpless for five years that she could not turn over in bed alone. After using two bottles of Electric Bitters she is wonderfully improved and able to do her own work." This supreme remedy for female diseases quickly cures nervousness, sleeplessness, melancholy, headache, backache, fainting and dizzy spells. It is a godsend to weak, sickly, run-down people. Cure guaranteed. Only 50c. Sold by Dr. G. S. Darling and J. E. Dillon druggists.
