#### The SPORTING WORLD

Splendid All Around Athlete. Clarence E. Weymouth of Yale university is looked on as an athlete who will do great work in the coming football season. Weymouth is one of the best all around athletes Yale has ever produced. He is a good baseball player, a good track and field performer and is strong and enduring on the gridiron.

Weymouth comes from an athletic family, his brother being noted for ability in different branches of sport. Wey-

CLARENCE E. WEYMOUTH.

mouth was captain of the freshman which defeated Harvard in this year's race on the Thames course. His favorite football position is full back, and he will probably be the equal of Perry Hale, Yale's last great plunger.

New Rules For College Athletes. For the past decade the big athletic clubs of New York, Boston and elsewhere made it a custom to grab all the crack college athletes during the summer vacation and train them for the Amateur Athletic union championships and other prominent meetings.

But there is every indication that this practice has come to an end, and in future if the college athlete competes at all in sports outside of the intercollegiate A. A. A. A he will represent his col-

The initial step toward the new reform has been taken by the faculty of Princeton university, who passed a rule this year prohibiting all athletes of that institution from competing for athletic clubs. No restriction was placed upon the athletes as to when and where they should compete, but it was made imperative that on all occasions Princeton men should wear the Princeton colors and not even interwoven with that of any athletic club.

The matter has been mooted around among the other colleges, and those in favor of the exclusiveness and purity of college athletics at Yale, Harvard, Pennsylvania and Columbia favor the precedent established by Princeton.

It is quite probable that a rule similar to the one inaugurated by Princeton will be introduced at the next general meeting of the Intercollegiate A. A. A. A. applying to every college member of the association. Of course the rule may not suit some of the smaller colleges, but the larger ones may follow in the footsteps of "Old Nassau."

Cured of Chronic Diarrhoea After Thirty Years of Suffering.

"I suffered for thirty years with diarrhoea and thought I was past being cured," says John S. Halloway, of French Camp, Miss. "I had so much time and money and suffered so much that I had given up all hopes of recovery. I was so feeble from the effects of the diorrhoea that I could do no kind of labor, could not even travel, but by accidedt I was permitted to find a anxious that it be in reach of all who suffer as I have." For sale by Dr. G. S. Darling.

Mossback For Boston.

Hooten-What has got into Stoughton? This is the fifth time today he has been in bathing.

Falmouth-Yes; the doctor told him guests. to take a glass of whisky upon coming four detectives in evening clothes there.

#### HUMOR OF THE HOUR

A Study In Effects.

Being a young wife and mindful of what her good parents had dinned into her understanding, she has been conscientiously doing her best to keep down expenses and lay by for the rainy

The sewing woman had been there the other day and completed a "dream of a skirt." The youthful matron, who had been doing the housework in addition to helping with the sewing, was too tired to put on the skirt that night and turn about in front of the mirror, as women have always been given to doing since skirts first came into vogue.

But the next morning after she had donned a light wrapper she bethought her of the new skirt and tried it on over the wrapper. Having admired it from every angle, she hung it up caressingly and went to sweep the walk in front of the house.

She noticed that the neighbors laughed, but knew that they would not be making game of her. But strangers walking and driving by also laughed, and here is where her temper asserted itself. She swept with more vigor and fairly bounced all over when she noted that the laughter increased.

Rosy and short of breath she went into the house and, of course, took a look into the first mirror she reached.

"Good gracious!" she exclaimed as she tore off a generous sized bustle over which the skirt had been fitted and which had been worn outside the wrapper during the entire sweeping expedition. "Think of me bobbing around out there with a white sunbonnet, a yellow wrapper and a black bustle!"-Detroit Free Press.

What Troubled Him.

"I don't see," he said to the police official, "why you get out of the way just at this time. Some of your enemies are under investigation, and you ought to be able to tell a lot concerning

"True," answered the man who has surance have I that the investigators will confine their attention and their questions to what other people have done?"-Chicago Post.

#### A Night of Terror.

"Awful anxiety was felt for the widow of the brave General Burn ham of Machias, Me., when the doc tors said she would die from P neu monia before morning" writes Mrs S. H. Lincoln. who attended her that fearful night, but she begged for Dr. King's New Discovery. which had more than once saved her life, and cured her of Consumption. After taking, she slept all night. Further use entirely cured her." This marvelous medicine is guaran teed to cure all Throat, Chest and Lung Diseases. Only:50c and \$1.00. Trial bottles free at Dr. G. S. Darling's and Jas. E. Dillon's drug

If it be true that Rockefeller is about to give another large sum of money to the Chicago University, consumers of gasoline may look for another raise in the price of that article.

Much favorable comment has been caused by the obvious fairness of the Schley judges, which has been in marked contrast to the partisanship of the Navy Department. Admiral Schley will get justice whatever the verdict may be.

Two often when a man in offic tries to do his duty he is lied about. The politicians do not like him and loafers hate him. All combine to make him trouble. Still it is better to be honest and try to do right in Ex. office and out of office.

A law was passed by the last legislature raising the age for school teachers from seventeen to eighteen years, and making the compulsory age for children in the country, be- to office to represent some political tween eight and fifteen and in the party, or do we elect them to recities between seven and fifteen

Trust raised prices a year or two ago because of the Porto Rican tarriff million dollars is due to the Trust on account of the Supreme Court decision. What we want to know is where the public comes in on the

"Tip" Aplin's managers must be getting badly frightened when they are compelled to use the assassination of President McKinley as an excuse why "Tip" should be elected to congress. Such campaign thunder should bring a blush of shame to the cheek of any fair minded man. Shame gentlemen, shame.

The question as to whether the Boers ment to surrender on account of Lord Kitchener's proclamation has been sharpely settled in the negative by their inflicting three severe defeats on the British and by the practical certainty that they have successfully invaded the British colonies. Dutchmen are stolid, but then, are notoricusly hard to beat.

Brains and great executive ability are potent factors in a man's success, but without the firmest and most thoroughly grounded principles of cardinal honesty they are factors which cannot make for success. It is the combination of great ability and sterling integrity that places men in control of large interests and keeps them there .- October Lad Home Journal,

Most people seem to think that the American. The party includes a life is a great grab bag, into which they should thrust their hands and take out as much as possible, without putting in anything. There could not be a greater mistake, for we shall find that we get out of same state as comptroller of the curlife just what we put into it. If rency. we put in misspent hours, wasted opportunities, slipshod work, botched material, we shall be paid in kind. No matter what we give the world, it pays us back in our own and is a son-in-law of Senator Cullom coin. If we give it our best-good, of illinois. His lattice grant honest, faithful work, however hum- Mr. Ridgley since early manhood has ble it may be-we shall receive our been connected with financial enterjust reward. But, if we try to prises. He is at present secretary and grasp all the good things and give treasurer of the Republic Iron companothing in return, we will be com. of the steel trust. He has taken an inpelled to swallow some very bitter terest in politics as a supporter of his portions. We shall find, when too father-in-law. He is indersed for the late, that we have squeezed our comptrollership by Senator Mason as orange dry, and that nothing but also exerted his influence in obtaining the rind is left. -Success.

Teachers are none too plentiful in any of our counties. Tip-top teach ers do not exceed the demand in any county. Why should they? They can make more money and make it easier at something else. Nothing will remedy this condition save an increase of wages. Stop the leak There's little use supplying new teachers unless we can make it an object for our best and brainiest youth to stay in the profession .-- Michigan School Moderator.

Hon. Geo, D. Jackson spoke from the grand stand at the race track Wednesday afternoon, and made a very favorable impression upon his hearers. Personally Mr. Jackson is a man of very striking appearance, of robust physique and digmfied in manner. He is not an orator nor a professional politician, but a man of sound business judgment and knowledge of affairs. The democrats of the Tenth district may well take pride in having so able a man upon their ticket for congressional honors .-West Branch Herald Times, (Rep).

One of the first things congress should do at the coming session is to pass a law which will give as far as possible greater protection to our presidents from the assassin's bullet. Under the powers of the constitution congress has authority to declare acts of treason, and an assault upon the head of the government should be made one of them. Attorney General Knox will it is stated draft a bill for congress to this effect, that any attempt to assassinate the nation's chief executive is an act of high treason and punishable with death .-

The supporters of Mr. Aplin are making the claim that should Mr. Jackson be elected to congress he would not, or could not represent the people of this district for the reason that he is a democrat. This is a most rediculas claim. Do we elect men present the people of their district regardless of party? The trouble is we have too long elected politicians You remember that the Sugar to reprresent their party. It is time we elected some to represent the people. Our district now has an oportunity of electing a sound bright bill. Well, now, the Treasury De- business man, in the person of Mr. partment had concluded that half a Jackson, and they should not miss the opportunity.

#### PEOPLE OF THE DAY

Baldwin Heard From.

Word comes from Christiania that the steamer Frithjof, arriving at Hammerfest, reported that she successfully landed the Baldwin-Ziegler arctic expedition at Camp Ziegler, in latitude 80.24 north and longtitude 55.52 east, in Algen island. Mr. Baldwin intended to start northward on Aug. 24 by what is called the interchannel route across Markham sound. This is probably the last word that will be heard from Baldwin for two years.

The Baldwin-Ziegler expedition is probably the best equipped American arctic expedition that has gone out in

BALDWIN IN ARCTIC COSTUME. years. Baldwin has two ships, the larger of which, a stanch whaler, is called

expedition is thoroughly American in every respect.

It has not yet been officially announced that this appointment is to be made, but the president is known to have practically decided upon it.

Mr. Ridgley is about 42 years of age the appointment

roung Clews wields the Baton, Henry Clews, Jr., has made his debut at Newport as a musical conductor. We all knew, says Cholly Knickerbocker, that he had musical abilities of no mean order, but we none of us dreamed that he aspired to the laurels of Walter Dansresch. At a classical concert given recently at one of the cottages he assumed the direction of the orchestra and wielded the baton throughout the evening with the maestria and brio of a Thomas, to the amazement and admiration of his numerous acquaintances and friends, who had been altogether ignorant of his talents in that direction.

New York's Police Investigation. The investigation of New York's police department, which has brought out a whole chapter of startling incidents, is attracting the attention of the entire country. William S, Devery, deputy commissioner of police, is a central figure in the affair. Devery was chief of police up to about eight months ago, when the law governing the force and Its administration was changed, a one

man commission being substituted for the commission of four that has hitherto existed. Michael C. Murphy is now the commissioner of police, but William S. Devery, the deputy commissioner, is practically in charge of the details of the department. Mr. Murphy, like Mr. Devery, is deeply interested in the present investigation.

#### The Queen's Present.

Queen Alexandra has ordered a special voiturette to be made for presentation to the downger empress of Russia. The car is to be eight horsepower and is to be of the spider type, finished and furnished in the most luxurious manner that money can command.

The Kniser Likes Statuary. The German emperor's chief passion seems to be statuary. "There are 34 sculptors in Berlin," he remarked to a friend the other day, and he knows them all personally, visits their studies and likes to be photographed there among the clay sketches.

An Indian's Great Run.

Candiras DeFoya, a Ute Indian, recently broke the world's record for a 100 yard dash at Colorado Springs, Colo., winning in nine seconds. Another Indian, second in the race, made feature of Colorado's twenty-fifth an- Cough Cure. C. A. Wakeman. niversary celebration. Cowboys gave some excellent samples of broncho

As to Cricket.

It is practically assured that an English cricket team will visit the United States next season.

That is a game in which we joyously concede supremacy to the British. We cannot play the continuous game of cricket with our English cousins, and we rejoice that such is the case.

Joe Walcott's Ambition.

Joe Walcott expects to go to England this fall and meet "Philadelphia Jack" O'Brien. Parson Davies has gone to England and will try to arrange the match. The boxer that defeats O'Brien will win a pot of money, for the English sports believe him in- | State Street, vincible.

A Voracious Cyclist.

Frenchmen are proverbially good eaters, and Lucien Grognet, the Parisian cyclist, now in America, is no exception. The big rider, who left France to escape the army, can vanquish double orders at a table d'hote dinner, with liberal portions of the liquids that accompany them.

Jim Hall's Plight.

Jim Hall, the once noted Australian middleweight pugilist, is now at Buffalo. Hall is not in good health and will never be able to fight again. A number of Hall's friends are trying to raise enough money to defray Hall's expenses to his home at Sydney.

Have you a sense of fullness in the region of your stomach? If so you will be benefited by using Chamberlain's Stomach and Liver Chamberlain's Stomach and Liver Herald, a newspaper printed and circulated in said County, three successive weeks previous Tablets. They also cure bleaching said County, three successive weeks previous to said day of hearing. and sour stomach. They regulate the bowels too. Price, 25c. Sold by G, S. Darling.

#### FOR THE CHILDREN

My Lady's Toilet.

Here is a game that gives boys and girls no end of fun. It is called "my lady's toilet" and requires no materials except a wooden plate or a circular tray-indeed, any circular object will do that may be twirled around on the floor and is not easily broken.

Any number of boys and girls may play it. Each player takes the name of some article belonging to a lady's toilet, as hairbrush, hatbrush, comb, hairpin, gloves, etc. The players take seats around the sides of the room, and the one whose duty it is to start the game goes to the center and twirls the plate on the floor as hard as he can.

As the plate begins to spin he speaks some sentence in which he uses the name of one of the toilet articles, and the player who has that name must leave his seat and try to catch the plate before it stops twirling. If he fails, he pays a forfeit and takes the twirler's place. If he succeeds, he takes the place without paying a forfeit.

The plate spinner generally speaks a sentence like this, "My lady is going out, and she wants her gloves." The player whose name is "gloves" then runs to the plate and tries to catch it.

The spinner has a right at any time to cry out the single word "tollet." and when he does all the players have to change seats. The one that does not get a seat-the spinner himself always secures one-must then take the plate and pay a forfeit.

Forfeits may be redeemed at the end of the game.

Wrongly Named.

You must not think that turkeys first came from Turkey, for they are natives of America. And the Turkish bath originated in Russia. Nor must you think camel's hair brushes are made from the hair of the humpbacked quadruped. They are mostly of the bushy hair from squirrels' tails. German silver not only is not silver at all, but it was invented in China centuries ago, and it is an alloy of some of the inferior metals. Porpoise hide is not made from porpoises at all. People get it from the white whale. Jerusalem artichokes are not natives of Jerusalem, but are a kind of sunflower. The French call them "girasole" ("flower turned to the sun"), and girasole became corrupted into Jerusalem.

Cork legs are not made of cork, and they didn't come from Cork. The willow tree usually furnishes material for them. Cleopatra's needle, that wonderful obelisk of Egypt, was made 1,000 years before Cleopatra was born and really has nothing to do with her. Irish stew is an English dish, and turtle soup seldom has any real turtle in it. Prussian blue, the beautiful color, is not a special product of Prussia, but of England. And so you see we frequently find that our language has names for things that are "misfits."

Mrs. S. H. Allport, Johnstown, Pa., says: . 'Our Little girl almost strangled to death with croup. The it in 91-5 seconds. This occurred in doctors said she couldn't live but she front of the grand stand in a closing was instantly relieved by one Minute

Some one that claims to know says that of about six hundred varieties of weeds that are growing in our fields, sheep are known to eat 515 yarieties, while horses, cattle and hogs eat but few each. It is known that sheep destroy many weeds that our other farm animals do not care for or will not eat unless starved to it, and this is why from four to six sheep can be kept in pasture with each cow. They will eat what the cow leaves, and by the destruction of weeds and the fertilizer they leave in the field will enable the pasture to furnish better food for the cow than they would have if the sheep were not there, at least after the sheep have run with them a year.

A Shocikng Calamity "Lately befell a railroad laborer," writes Dr. A. Kellett, of Williford, Ark. "His foot was badly crushed, but Bucklen's Arnica Salve quickly cured him. T. G. WINNETT, H. A. CLOUGH G. P. A. Local Agent Economy of Good Roads.

The saving effected through the construction of scientific roads which can be kept in good running condition at small expense would more this saving is not always apparent at first, for the first cost seems to overshadow all other considerations in the minds of the short-sighted economists. It took two decades of agitation to convince most of the residents of rural districts that it was more profitable to build good roads under the direction of road engineers than than to rebuild and repair the old dirt roads after a fashon in vogue since the beginning of things. The greatest triumph in the movement may be said to be the complete education of the farmers to a proper ap. preciation and understanding of the whole question of scientific road building.-George Ethelbert Walsh, in Gunton's Magagine for August.

#### Anarchy in America.

That America has the anarchist problem to deal with has become suddenly and terribly evident, The peo. ple of the United States were not greatly stirred, not so much as they ought to have been, when only a short time ago a plot was hatched in Patterson, N. J., which resulted in the murder of King Humbert, The people of Italy still mourn the death of their ruler, who was slain by American anarchists, but America rested in fancied security, supposing that the anarchists, most of whom are of foreign birth, would confine their attention to rulers across the water.

This attitude of national indifference has been terribly rebuked. We now perceive that the anarchist in On Saturday last the jury in Oscar his crazy hatred of government makes preach a doctrine of peace. She lec-The case of Henry Wood charged tured in Cleveland about three years her influence. The racred right of free speach never included the right to encourage murder. Herr Most and the rest of the eastern group of of anarchists openly teach that lawlessness, confiscation of property and murder are the means by which men should get what they insanely suppose to be their rights. Doctrines like these were openly inclucated in the play which Most and his associates put on in New York last winter. Another representing the murder of Humbert by Bresci was suppressed by the Paterson police lately.

What to do with these teachers of anarchy is a problem which must be faced and solved. The State Republican does not pretend to know how

formed. The arrest of those making anar-chist speeches or taking part in anarchist plays is an extremely doubtful policy. It is much too likely to grow into oppression and the abridgement of constitutional right and except in the most evident and fragrant cases arrest should not be resorted to It makes heroes of the anarchists in the eyes of all their fellows. A rigorous inspection of immigrants and the exclusion of anarchist orators and teachers will do much. One of the most distinguished of Russian anarchists, a man of rank, learning and good character, publicly expressed sympathy with the Haymarket anarchists who were hanged for murder, when he made a speech in Chicago lately. The mistake of permitting such things should not be repeated, But it is plain that this will not be enough. Anarchy is well rooted in America. How to uproot it is a problem about which Americans must think deeply and earnestly .- State Republic.an

#### RENDERING COMB.

An Easy and Economical Method of Getting All the Wax.

Old combs, drone comb cut out, combs more or iess eaten by moths and full of webs often accumulate till something must be done. A correspondent of American Bee Journal describes the way in which he dealt with some of the worst combs and refuse from melting others, including moth eaten combs, which latter, he says, are the meanest things that can be found in that line: I did not want to go into much expense, as the wax to be obtained

Wax. Water Line. Netting or Sleve Refuse and Water Water.

was not worth very much-at least I thought so-but I got considerably more than I expected.

All the materials needed to construct the apparatus I used were an old tin bucket, a piece of old tin to make an butside jacket to confine the heat of the oil stove around the bucket, some scraps of wire and strong galvanized fron, a scrap or piece of wire netting and some nails in place of rivets.

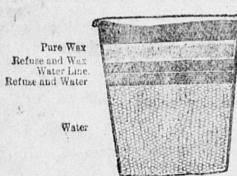

While on the subject it may be well to say that wire nails heated redhot and then slowly cooled become soft enough to make excellent rivets. I had the oil stove already.

If you melt some combs in a receptacle of any kind with a quantity of water and let it cool and then investiwax has come entirely above the water, being lighter. The refuse, cocoons, mothwebs, etc., being somewhat lighter than water, form a mass partly above the water line and partly below, something like the sketch.

I said that below the water line and boiling the wax has had the chance, or, rather, the time, to disentangle itself entirely from the refuse. Now, when the quantity of wax is considerably larger than the amount of refuse all that needs be done is to take the cake out and scrape off the under part The scrapings can be added to the next

But when the amount of refuse is considerable there is not enough wax | eleven cows. to rise over the refuse, and the cake you take up is a mixture of refuse and wax. The problem was how to keep all the refuse under the water line. I first melted the combs in the tin bucket with water enough to fill it about twothirds, stirring and boiling long enough to disaggregate the combs entirely. I then put in the sieve made of wire netting re-enforced by bands of galvanized iron and fastened it there. Then I added enough boiling water to bring the wax entirely above the sieve and let the whole boil long enough to give all the wax time to come through the netting. When cold, it is something like the second sketch.

One difficulty I met. I had to boil the whole thing quite a time in order to get all the wax to rise. After think-

ing about it I concluded that by adding a considerable quantity of salt to the water the wax would rise much quicker, and it did.

Why does the wax come on the top of the water? It is because the wax is comparatively lighter than water. That difference of weight is the force that pushes the wax above the water.

Now let us add, say, one pound of salt to the gallon of water. The weight of the water will be increased by about 12 per cent, and the force that pushes the wax above the water will also increase in proportion.

A Good Grape For Home Purposes.

Though the Isabella is no longer considered a desirable variety for table purposes by our specialists and the dealers, it is still worthy of some attention by the rural home builder. It is especially hardy, quite vigorous, and lent variety for jelly making, and grape jelly rates very high in the estimation of the American housewife. It is likewise one of the best varieties from which to make grape must-i. e., unfermented grape juice-for which there is a steadily growing demand in one form or another.

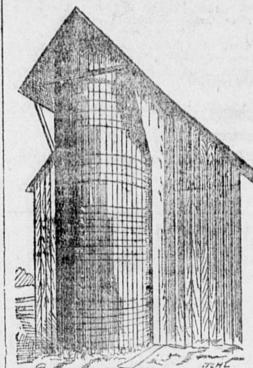

Field Corn In the East.

Many a farmer has been saying that there was no profit in growing corn in New England, when western corn could be bought at the market price of several years past; but when they find that a dry season in the west has increased the price of 10 cents a bushel and may add 10 cents more to that before the season is over, they rather envy the man who has a field that will fill the old corncrib and give a good stack of corn stover to save the hay next winter - American Cultivator.

#### TWENTY DOLLAR SILO.

Easily Built and Has a Capacity of About Thirty-six Tons,

In a recent issue Hoard's Dairyman published the accompanying picture and detail of construction of a silo that was built by an Oregon farmer at a cost of \$20. The sile is 10 by 24 feet, inside measurement. It is a stave silo. built of 2 by 6 scantlings set edgewise, and they are neither sized nor beveled There are sixty-two staves or scantlings. They are set on a foundation of gravel and brick. For the foundation the earth is excavated to the depth of fourteen inches, two feet wide, in circular form. This is filled in with stone and brick (the brick were used simply because they were handy; gravel is just as good) and tamped down solid. On the center of this the bottom ends of the staves are set. For hoops or they are. bands to hold the staves together he

PERSPECTIVE VIEW.

uses woven wire fencing cut in about thirty foot lengths. The ends of the wire are run through a 4 by 4 timber, the timber turned half over and wire | These plants are occasionally very ungate carefully, you will see that the fastened by twisting the ends around. Through these timbers are run three while others are comparatively succubolts with nuts for drawing them together and tightening the hoops.

sliage are made by cutting out three the cowpea. Clover should be cut staves for a distance of twenty-four when coming into bloom. Siloed earinches, which would make the opening lier, there would be too much acid. there would not be any wax. That is 18 by 24 inches. There are three of If cut too late, the resulting silage will true only when by sufficient stirring these openings, one between each band, be woody. Oats and peas may be cut there being four bands around the silo. They are cut on the bevel, with the longer sides inside, so the pressure of

the ensilage will hold them in place. The lumber in this silo cost \$12, the four foot woven wire fencing \$6.80 and | coming out. A deep silo will not rethe twelve bolts \$1.20, or a total of \$20. composed of wax and refuse mixed. The cost of labor is not taken into consideration. It required one and a half days to build it. This is of about thirty-six ton capacity and was built for

#### Pasturing Sorghum.

During the time the Kansas station has been pasturing sorghum several reports have been received of cattle dying in ten or fifteen minutes from the time they entered the sorghum patch, but in every case where we have been able to get details the cattle have eaten the sorghum in empty or nearly empty stomachs, says Professor D. H. Otis. Cattle should have their stomachs so well filled that they feel completely satisfied before touching the green sorghum and then should be allowed to eat it only a few minutes at a time until they are accustomed to it. If sorghum can be pastured successfully, as the Kansas experiment station has done, it means that the dairymen and stockmen can get an immense amount of pasture from a small area, which is available at a time when the other pasture is getting short and dry. Pasturing will also be the most economical way of utilizing sorghum. The man that turns his cattle in a sorghum field, however, must realize that he may be taking risks. He must weigh the evidence for and against, its use and then decide for himself if the benefits outweigh the risks.

#### Ihrmberlain's Cough Remedy a Great Favorit.

The soothing and healing properies of this remedy, its pleasant taste and prompt and perminent cures have made it a great favorite with people everywhere. It is especially prized by mothers of small children for colds, croup and whooping cough, as it always affords quick relief, and as it conthins no opium or other harm ful drug, it may be given as confidently to a baby as to an adult. For bysale Dr. G. S. Darling.

Care of Pastures. Whether you intend to try winter the land as well as desirable for feeddairying or depend simply upon sum- ing purposes. If clover can be grown, amount of care, a fairly good crop of mer dairying, it is necessary to have at least a small field should be includpalatable fruit, more of which should good pasture through the summer, and ed in the crop rotation. A small area be caten by our people. It is an excellin the late summer and autumn it is should be devoted to each, cowpeas and necessary to help the pasture out, says soy beans, and if one or the other is getting it away from me."-Washing- record is offset by the largest wheat W. Conway of Indiana in American found to do well on his soil a sufficient ton Star. Cultivator. This is simpler than many quantity should be grown each year to imagine. Sometimes it simply means put into the silo a load with each load fencing off a portion of the field, so the of corn. grass has a chance to grow while the cows are feeding on the other part. Constant daily cropping in hot, dry weather kills the grass and keeps

plants from ever getting any headway. If the pasture field is sufficiently large, fence part of it off in August and in before the leaves have been lost, says this way keep it green and healthful. Farm and Home. If secured in the Also be sure that the weeds and briers best possible condition, this fodder is are kept cut down. Do not let any of only a little inferior to silage in feed these go to seed. Their spread will ing value. Where corn is the main ruin a pasture lot quicker than any- crop the dairyman must expect to buy I was troubled with construction, un ture receives supvices from the thing. The cows do not disturb the some concentrated feed to balance his weeds and briers, and consequently ration. This may be linseed meal of they have the opportunity to grow and cottonseed meal. Where the corn thrive while the grass has not. At silage is well eared, bran with a very ly cured of my old complaint. I see Cure, which diges - when the cure least give the latter a fair chance in little oilmeal makes a good combina recommend them. Dr. C. A. Wake- and con't help had no see

If a calf gets the scours-if it begins to grit its teeth, if it follows your finger to the milk and suddenly jerks back the head and bites your finger so you want to box its ears-take all milk away. Give it a teaspoonful of laudanum, four times as much pure black berry brandy and five drops of creoline, with a little water, says W. F. McSparran in National Stockman. Give this out of a bottle or with a small syringe pushed gently. If passages are not checked, repeat every four hours till

barley and pour over it three half pints of boiling water. When cooled to about 160 degrees, add two tablespoonfuls of sweet cream; when cooled to 98 degrees, pour off liquid and feed. The same barley can be used for making the drink as long as it does not sour. Remember, whatever may be the cause, milk is an aggravation of it. If barley cannot be had, use rice. Two raw eggs are easily digested and strengthening. I have had good results also by giving mixed equally in connection with above medicine. Some will die, but this will pull many of them through. To recapitulate, feed lightly at blood heat, keep warm and light and dry. Scrub and disinfect and whitewash.

Silage From Various Crops.

If it is desirable to make silage from crops other than corn, the same general plan for filling the silo may be adopted, but the time to cut these crops varies, says Farm and Home. Possibly the best time to cut sorghum for silage is just before maturity. even, some stalks being quite dry, lent. Soy beans should be harvested when the beans are fairly well devel-The openings for taking out the en- oped in the pods. The same is true of when the pods are filling. The sunflower should be nearly mature. Rye and wheat are not often used for of the beets. This ripening is made silage, but if wanted for that purpose should be cut when the heads are just quire as much compacting even with enced eye soon learns to detect a field lighter crops as a shallow one. It is very essential to tramp down the upper portions as the feed is put in.

Home Butter Making.

As soon as the milk is drawn from has accumulated in one solid mass.

Buttermilk is then drawn off and thoroughly rinsed. After this has been done the butter is salted at the rate of morning it is worked thoroughly and made into rolls or packed away in earthen jars ready for the market.

It is quite generally accepted that there is no roughage that makes such a satisfactory basis for the dairy cow's ration as does corn silage, says H. E. Van Norman in Farm and Home. This is especially true when yield per acre, cost of production, handling, etc., are taken into consideration. This give: the dairymen of the corn belt one of the first requisites for success-that is, an abundance of roughage at reasona-

While cows may live and apparently thrive on silage alone, it is desirable that other feeds be given which will balance up the ration. The corn being rich in fat forming material, needs to be supplemented by flesh and milk making foods, such as bran, linseed meal, if the underpinning is open. cottonseed meal, clover hay, soy beans and cowpeas. Fortunately these crops, which the dairyman should grow to supplement his corn crop for feeding purposes, are a distinct advantage to

Balance the Silage.

If it is not practicable to have a sile this year, cut the corn early, place in small shocks and as soon as sufficiently cured husk and put the fodder under cover while still bright and green and WHEN TO CUT CORN.

How to Use It to Best Advantage. Indications Vary With the Soil-A Cutting and Shocking.

An unusually large amount of corr will be cut this fall. The shortage of need water and when to apply it so pasture made it necessary for many that they will not suffer from drought farmers to begin feeding in July. This nor be injured by too frequent or long season will require an immense too generous applications requires a amount of forage, and as corn will be knowledge and experience that can be exceedingly scarce farmers will depend gained only by practice and a close obmore than restal upon the fodder erep servation of various crops under irrito carry their animals through. As a gation. It is the experience of many if it is sufficiently mature to make good gation than from drought. forage. In view of all this The Amer-

ican Agriculturist advises as follows: | development of the crop is first arhis corn crop to the best advantage. If ture in the soil. Some experimenters he has stock that can be fattened on maintain that this point can be more little older.

had it remained uncut a week or so indications that a plant needs water. longer. If possible, the cutting should Grain which has suffered from be delayed until the lower blades have drought may mature, but the straw will In other words, it should be well advanced in the dough stage.

The size of the shock will of course depend upon the character of the corn and somewhat upon the practice in the locality. In the central west shocks sixteen hills square seem to be favorites, but farther east smaller shocks, ranging all the way from eight to twelve hills square, are most common.

This year the corn is short and can be handled very easily with a corn

#### GATHERING SUGAR BEETS.

The Effect of New Fall Growth on

The time of harvesting sugar beets is governed by the time of the ripening apparent by the outside leaves of the plant taking on a yellowish tinge and drooping to the ground. An experiof ripe beets that is ready for harvesting, the whole field being colored to this yellow tint and the leaves showing this drooping tendency peculiar to the matured plant. The beets have now finished their work, and the next step the cow it is strained and at once run of the grower must be governed by his through a separator at a temperature locality. If he is in a locality where of about 70 degrees, says a contributor there is a probability of rain, the beets to New England Homestead. The must be harvested and placed in silos. cream is put away in a cool place so This would be the case in most of the that the animal heat is all driven off sections where rain conditions prevail, before it is mixed with older cream. I such places usually having strong rains churn twice every week. The cream in September and October, followed by is put in a barrel churn, which is re- more or less warm days. The effect volved continuously until the butter of the rain will be to cause the beets to begin growing again, and new leaves will soon be noticed starting out, as fresh cold water added and the butter well as new lateral roots from the beet in the soil, all the beets showing a general tendency to a second growth. Seone and one-half ounces of salt per rious damage to the crop will soon be pound of butter. It is put away and done in this way. The sugar content allowed to stand over night. Next of the beet goes down materially, and its impurities increase, so that if the rains are marked and followed by warm days it is possible for a whole crop to be lost, so far as their fitness for factory purposes is concerned.

#### Root Storage.

Where there is no barn cellar for the storing of roots a place such as is shown in the cut from The Farm Journal can be extemporized by double boarding a boxlike space at the side of the barn floor in the hay bay. This

place should extend down to the ground, cutting through the floor of the bay, and double the space below. Use cedar boards

A PLACE FOR ROOTS. for the lower part and bank the earth well about them on the outside. Leave an air the cut. Bank the outside of the barn | area are almost identical.

#### WHEN TO IRRIGATE.

Few General Signs.

In order to determine just when crops general rule, green fodder, particularly practical irrigators that, if an unlimited this year, is more valuable fed directly supply of water is available, crops after cutting than at any other time more frequently suffer from overirri-

It is difficult to determine when the The wise farmer therefore will utilize rested on account of a lack of moisthe whole corn plant before frost or at definitely decided by an examination As food take two ounces of whole any rate partly fattened before that of the soil than by the appearance of time, he will cut his corn now and feed the plant, as the latter shows evidence it at once. If he can get his cattle or of the check in its growth some days sheep to market before frost comes, after it has occurred. Usually it is they will be more profitable than if he then too late to prevent serious loss, simply keeps them in good flesh, cuts as the crop rarely recovers from such and cures his corn and attempts to fat- treatment and seldom reaches the deten them this winter when they are a velopment it would have attained if it | had been irrigated at the proper time.

Where corn is intended for fodder it | Plants will usually indicate by a | Z should be allowed to mature fairly well change in color or by their general apbefore cutting is started. However, if pearance whether they need water a great deal is to be taken care of be- or when they have been overirrigated. about ten grains of bismuth and pepsin | gin cutting when it is still on the | Most field crops turn to a darker green green order. Cut about oneshalf a when in need of water, and the leaves shock, allow to cure a day or two, then and stems show a tendency to droop or cut the remainder. This will result in curl. The lower leaves assume a pale a fodder highly digestible, although not yellow. A crisp or dead appearance quite so heavy as it would have been in the lower leaves is one of the best

died and the kernels are well dented. be small and short and the kernels will be shrunken and inferior in quality. Alfalfa and similar crops have the appearance of cured hay. Where field crops are overirrigated the color of the foliage becomes a yellowish green and the plants have a sickly appearance.

These indications vary with the quality of the soil, so that it is impossible to lay down fixed rules to govern the number or frequency of irrigations. Only close observation for a number of years on the same farm will enable a person to tell by the appearance of the plants whether they need water or

The amount of moisture in the soil may be determined with sufficient accuracy for the needs of the plant by examining a sample taken a few inches resentative to the Congress of the United States from the surface of the ground. If it from said District, for the unexpired portion of clings together when molded in a ball the term of office ending the fourth day of and shows the print of the fingers, there is moisture enough present. If the earth falls apart when the hand is Crump. In witness whereof, I have hereunto opened, irrigation is needed. As stated above, this point is passed some days before the plant shows indications of suffering.-Johnson and Stannard.

### DATA FOR THE FEEDER.

Manurial Value of a Few of the Feeding Stuffs.

The choice between different feeding stuffs should often be influenced by their effect upon the manurial value of the excrement. Below are given a few data by way of illustration:

MANURIAL INGREDIENTS IN ONE TON.

I		Ph	hosphoric		
ļ	N	litrogen.	acid.	Potas	
ļ		Lbs.	Lbs.	Lb	
1	Cottonseed meal	. 135.8	57.6	17	
į	Gluten meal	. 100.6	6.6	1	
1	Wheat bran	. 53.4	57.8	32	
	Dried brewers' grains	. 72.4	20.6	1	
	Indian cornmeal		12.6	8	
	Linseed meal (new process)	. 115.6	36.6	27	

It will be noticed that gluten meal, though rich in nitrogen, is unlike linseed and cottonseed meal, it being very deficient in phosphoric acid and potash. Dried brewers' grains, though resembling bran in digestible protein and nonnitrogenous matter, are relatively poor in potash and phosphoric acid. Cornmeal, corn fodder and corn sto-

ver are all poor in ash. Clover hay, cottonseed meal, bran and linseed meal are excellent supplements to Indian corn products so far as concerns both protein and ash. Ash ingredients, as stated elsewhere, are necessary in the animal economy, particularly in the production of milk, so that they may wisely be considered from the standpoint of food and of manure. A ton of cow's milk contains 10.3 pounds of nitrogen, 3.8 pounds of phosphoric acid, 3.6 pounds of potash.-Rhode Island Station.
